WHAT IS ACRYLIC INFUSED WOOD FLOORING?

Real wood with the added strength of acrylic infused throughout the top layer.

Engineered construction uses 7 plies of marine grade Baltic Birch, glued with marine grade adhesive, topped with a 1/12" thick acrylic infused wood wear layer.

Nydree invented the process in 1963 and continues to perfect it.

300 times more durable than natural wood.

Container Vacuumed

Filled/ Infused

Depressurized & Drained

Exposed to heat

Hardened
